

THE SMARTEST WAY TO PROTECT YOUR ENTERPRISE TODAY

Work smarter on your recovery strategies, not harder. With the intelligence of Compellent and Syncsort in your heterogeneous environment your recovery point objectives (RPO) and recovery time objectives (RTO) will drop dramatically, while your existing technology investments will be optimized.

Boost Business Continuity Without Breaking the Bank

Maximize Performance, Minimize Expenses

Reduce CPU and bandwidth more than 90 percent by using Syncsort's Backup Express (BEX) to send and save block-level changes.

Drive Down Storage Costs

Eliminate costly duplicate copies by relying on BEX to backup clusters accurately the first time. Leverage Compellent's Thin Provisioning to cut disk requirements in half.

Backup Without Causing a Backlog

Safeguard Windows, UNIX, and Linux server systems with minimal disruption using BEX and Compellent Replays to take snapshots and perform storage maintenance without downtime. Use these as staging areas for backup to tape without time constraints.

Shrink your Bandwidth

Cut bandwidth costs in half and increase backup success rates using BEX and Compellent's Remote Instant Replay to eliminate replication of duplicate data or empty space.

Protect Your Enterprise and Your Investments

Work with the Tools You Have Today

Make disk-based backup and recovery a reality in your current server environment. Syncsort's application integration streamlines heterogeneous environments while Compellent's Persistent Hardware Architecture provides flexibility for the future.

Take Green to the Bank

Shrink your data center footprint up to 92 percent by maximizing consolidation benefits with BEX Virtualization and Compellent's Advanced Storage Virtualization.

Scale as You Grow

Save by scaling your storage as needed using Compellent's Thin Provisioning and modular architecture.

Reduce Administration, Improve Restore Times

Recover Rapidly

Locate what you're looking for quickly, using a unified interface to ease file searches. Reduce RPOs without degrading performance by relying on space-efficient Replays and BEX.

Cut the Tape

Stop sifting through tape—BEX and Compellent make it affordable to keep up to 90 days of full backups on disk.

Save Automatically

Automate tedious storage management and streamline application cloning using intelligent, dynamic features that redirect staff to more strategic projects.

"Since implementing Syncsort with Compellent we've reduced the district's RPO by nearly 50% and our RTO by nearly 75%."
